Final reflections on the ETHNA System legacy

by Elsa González-Esteban, Associate Professor at the Universitat Jaume I
(Spain) and ETHNA System Project Coordinator

We knew from the start that the institutionalisation of ethical and responsible behaviour in research and innovation organisations would be no simple task. While practising science with and for society is fundamental in a rapidly changing world, it requires a strong ethical infrastructure. The ETHNA System project faced head on the challenge of institutionalising a system that manages ethics in research and innovation resulting in an abundance of valuable practical tools and resources for organisations. The experience gained from the implementation of the ETHNA System in different countries and contexts across Europe is invaluable and will continue to help promoting science with and for society long after the official end of the project in July 20203.

Our results

The success of EU-funded projects is shown by the wealth of results it leaves behind. From policy briefs to trainer manuals, the ETHNA System offers those wishing to implement an ethical governance system as well as other stakeholders a range of documents, guides and other materials.
